

Please note that the IMS Pro Tool Kit is required as this tool kit is a supplement and adds the tools required for installing the IMS Upgrade in MY06-08 intermediate shafts (with engine disassembled) and for the IMS Solution.

MY06-08 IMS Upgrade Tools

Top row, left to right: MY06-08 bearing puller housing (left). Replaces puller tube from IMS Pro-Tool kit when pulling bearing. Use with 06-08 Hex adapter (center) to thread onto center stud. 06-08 driver tool shown for installing new bearing (right). Use a dab of grease to help hold bearing to driver if desired.

For questions on the MY06-08 tools, please email info@LNengineering.com.

IMS Solution Tools

Bottom row, left to right: IMS Solution spin on filter adapter spanner tool (left). IMS Solution oil plug installation tool (2ND from left). Use a dab of grease to help hold plug (included in IMS Solution kit) to driver if desired. Narrow 12 pt socket for torquing center nut on IMS Solution (3rd from left). Bushing/bearing driver spacer insert – goes into the counterbore of the Pro Toolkit's bearing driver to accommodate for the longer center stud in the IMS Solution.

For questions on the IMS Solution tools, please email info@theimssolution.com.
